DETAILED ACTION

1. This Office Action is responsive to the application's election filed on 2/4/04. Accordingly, the selection of group 1, claims 1-3, is acknowledged.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

3. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

4. The abstract of the disclosure is objected to because the abstract contains more than 150 words. Correction is required. See MPEP § 608.01(b).
5. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 112

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01.

Claims 1-3 omits inter-relationships between the “decision parameter selection unit” with other components, e.g., “correlation value calculation unit”, “correlation circuit control unit”, etc, recited in the claims, to make the claimed invention as a complete operative device.

8. Claim 3 recites the limitation “the total monitoring section” on line 4. This limitation is lack of antecedent basis.

Claim Rejections - 35 USC § 102

9. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

10. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Honda (5,970,084).

As per claim 1, see figures 4A, 6 and 7, and col. 1, line 17 to col. 2, line 45, Honda discloses an apparatus comprising:

a correlation value calculation means (6, 11, 16) (see figures 6) having a number of correlation value calculators (25, 30) (see figure 7), each of which calculates a correlation value

Art Unit: 2631

between information, selected by selection means (4, 9, 14) (see figures 6), and an input signal (see col. 1, lines 48-55 and col. 2, lines 35-44); and

a correlation circuit control means ((5, 6, 7), (10, 11, 12) and (15, 16, 17)) (see figure 6) having a number of correlation circuit controllers (49, 33, 34, 35) (see figure 7) each of which receives a correlation value from a corresponding one of the correlation value calculator means and compares the received correlation value to a threshold during an interval and controlling the operation of each of the correlation value calculators by using each of the comparing results (see col. 2, lines 6-44).

As per claim 2, Honda discloses that the interval is obtained as a sub-interval during a total monitoring interval (-3dt, 3dt) of each of the correlation value calculators (see figure 4A, and col. 2, lines 22-44).

As per claim 3, Honda discloses that said threshold value is determined in order to determine whether one of the correlation value calculators operates or not during an interval (see col. 2, lines 22-44).
